

6med Personal Statement Feedback

<u>Element</u>	<u>Feedback</u>
Content Points well balanced? Is the PS medicine focussed?	<p>Good points raised Thank you medicine focused</p> <p>introduction starts off well however the length of the second sentence is quite long and the last one is too long the third is correct</p> <p>second line suggest adding some specific research/reading immediately after medicine is every academic subject and the introduction starts here that you can connect with specific hardcore understanding. You can include details a case that you can relate to your experience and then add more pathology and the drug used. You can bring other paragraphs where you discuss specific aspects of work</p> <p>Look forward to hearing about the third virtual work experience. The other two highlighted challenges with an environmental and professional. I think you can take some points regarding these</p> <p>What do you mean by RCP research? What do you mean by T2 research? I think the paragraph where you discuss the importance for the academic aspects of medicine needs to be improved. refer to the RCP structure more</p> <p>I think you should bring other paragraph on the other course research paper further up where specific research should be used</p> <p>Your paragraph on RCP is not well connected to your paragraph instead of using what you have read. I think you can bring the RCP</p>

	<p>Good paragraph regarding reading work.</p> <p>Excellent, well-developed and relevant paragraph with several points and a good link.</p> <p>The personal statement needs more length. Please consider the word count and adjust accordingly.</p> <p>Check you have made good points. I think you need to arrange this in a better structure and focus on writing them and making the personal statement more concise.</p> <p>Conclusion is sparse and needs work.</p>
Quality Each point fully developed and relevant? Are there enough points made?	<p>Needs work to clarify structure points, evidence, explanation and reflection.</p> <p>For contextualised evidence: research, work, studies, work/management, ethics and reflection.</p>
Finally... Punctuation and grammar? Sentence phrasing improvement? Paragraph ordering improvement?	<p>Need to check spelling errors.</p> <p>Try and include evidence relevant/reading relevant to the top 100.</p> <p>Consider what you do to improve your health and your fitness and how this fits with your goals. This is a reflective writing.</p> <p>Check phrasing of some sentences.</p>
Next Steps... E.g. Reading recommendations, Work Experience advice, Universities/Courses to research	<p>Have you checked your own work?</p> <p>Overall, I think this is a good start.</p>
